Frost protection convector FW 550 S

Heat when and where you need it

Heat exactly where it is required

The importance of heat availability based on need is becoming increasingly significant in many households. Much consideration is also given to the options available for heating rooms which do not have their own heating during winter months, so that they remain frost-free, thereby protecting the building from damage. The purchase costs of the heat source, and its operating costs, must be kept as low as possible.

Safe protection from frost

The FW 550 S frost protection convector from Dimplex is ideal for protecting small rooms which do not have their own heating, such as cellars, small storage rooms, garages, workrooms, conservatories and WCs. When the temperature drops below a given level, the device switches on automatically, keeping the room safe from frost in a cost-efficient way.

Frost protection convector FW 550 S

Frost protection convector FW 550 S

- ✓ Protection against overheating
- ✓ Indicator lamp for heating operation
- ✓ Infinitely adjustable temperature regulation
- ✓ Degree of protection IP 20 / protection class I
- ✓ BEAB

Protection against overheating

To protect the device from overheating, a bimetal strip is integrated into the power circuit near the heating element, which interrupts the flow of current when overheating occurs.

Device information

Order reference		FW 550 S
Connection voltage	V	1/N/PE ~230 V, 50Hz
Performance levels		OFF / 0,6 kW
Colour		White
Width	mm	260
Height	mm	242
Depth	mm	121
Weight	kg	1,2
