At a glance

Precision embedded in steel

The new generation of electric slide axes EGSK and EGSP impresses with its precision, repetition accuracy, compactness and rigidity.

The two axis series form a complete range with a uniform design, long service life and standardised mounting interfaces. The U-shaped steel housing serves simultaneously as

a guide rail. The slide combines linear guide elements and the spindle nuts of the ball screw in one component, thus avoiding the accumulation of production tolerances.

Both series come in three accuracy classes with the option of an additional slide (series 33 and 46 are also available in a short-slide design).

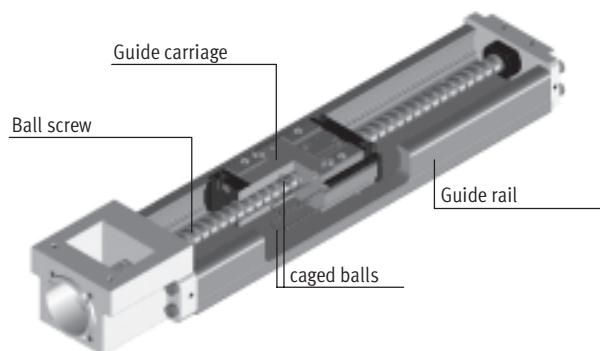

Electric slide EGSK

- Recirculating ball bearing guide and ball screw without caged balls
- Standard designs available ex-stock

Electric slide EGSP

- Recirculating ball bearing guide with caged balls
- Size 33, 46 features a ball screw with caged balls
- Low-maintenance
- Uniform operating behaviour with very low noise levels

Linear guide with caged balls

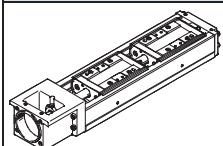

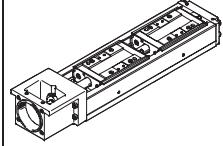

The linear guide features four rows of balls circulating within the guide carriage. In the loaded area, the balls run between the honed grooves of the guide carriage and guide rail until they are returned by means of the reversers in the end plates and the return channels. The very rigid design of the guide carriage enables precision

linear movements to be executed with impressive dynamism. The four rows of balls are arranged at a contact angle of 45°, giving the guide carriage the same basic load ratings in both radial coordinate directions. This type of guide can therefore be used in any mounting position for a wide range of load directions.

Axis characteristics

The specifications shown in the table are maximum values.

The precise values for each of the variants can be found in the relevant technical data section.

Accessories		→ Page/Internet
Type	Brief description	
[1] Cross connecting kit EHAM-S1	For mounting an assembly axis EGSK/EGSP at right angles on the slide of a basic axis EGSK/EGSP. The assembly axis is one size smaller than the respective basic axis.	38
[2] Covering kit EASC-S1	For covering the axis profile that is open at the top. The kit includes a slide adapter EASA-S1.	40
[3] Slide adapter EASA-S1	Required to mount the effective load in combination with the covering kit for axis variants with additional slide.	39
[4] Sensor strip EAPR-S1-S	<ul style="list-style-type: none"> • For mounting the inductive proximity sensor SIES-8M on the electric slide. • Switching lugs are included in the scope of delivery. 	42
[5] Proximity sensor SIES-8M	Inductive proximity sensor, for T-slot.	43
[6] Axial kit EAMM-A	For axial motor mounting (comprising: coupling and motor flange).	35
[7] Motor EMMS	Motors specially matched to the axis, with or without brake.	35
[8] Centring pin ZBS	For centring loads and attachments on the slide.	43
[9] Centring pin ZBS	For centring loads and attachments on the slide adapter.	43

Technical data

4 Determination of the load comparison factor f_v

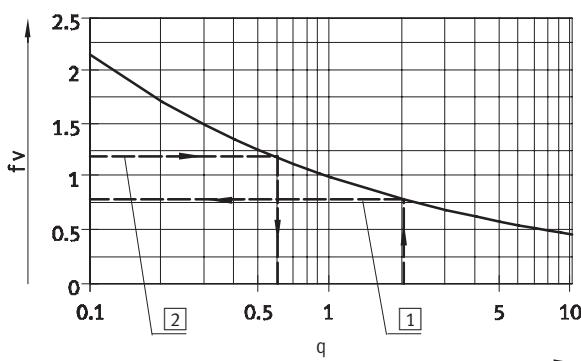

$$f_v = \frac{1}{\sqrt[3]{q}} \quad \text{with} \quad q = \frac{L_{\text{calc},\text{km}}}{L_{\text{ref},\text{km}}} = \frac{L_{\text{calc},\text{rot}}}{L_{\text{ref},\text{rot}}}$$

for $q = 1$:

Calculated service life (here desired service life) $L_{\text{calc},\text{km}} = 1 \times$ reference service life $L_{\text{ref},\text{km}}$
gives $f_v = 1$

for $q \neq 1$:

Calculated service life (here desired service life) $L_{\text{calc},\text{km}} = q \times$ reference service life $L_{\text{ref},\text{km}}$
read off (\rightarrow graph) or calculate f_v

f_v	Load comparison factor
q	Quotient of desired service life divided by reference service life
$L_{\text{calc},\text{km}}$	Calculated service life in km
$L_{\text{ref},\text{km}}$	Reference service life in km $\rightarrow 12$
$L_{\text{calc},\text{rot}}$	Calculated service life in rotations
$L_{\text{ref},\text{rot}}$	Reference service life in rotations $\rightarrow 12$

5 Calculation examples

Example 1:

EGSK-26-....-2P-H...

$L_{\text{ref},\text{km}} = 1,000 \text{ km}$

$L_{\text{calc},\text{km}} = 2,000 \text{ km}$

$$q = \frac{2000 \text{ km}}{1000 \text{ km}} = 2.0$$

$$f_v = \frac{1}{\sqrt[3]{q}} = 0.79$$

Result:

A desired service life of 200% of the reference service life means that the permissible total load must be 21% lower.

Example 2:

If the total load calculation gives a load comparison factor f_v of 1.2, the mathematical service life is only approx. 60% ($x = 0.6 \rightarrow$ graph) of the reference service life.

$$q = \frac{1}{f_v^3} = 0.58$$

6 Static sizing

Ball screw

$$F_{x,\text{stat}} = \text{Max}[F_{x1}, F_{x2}, F_{x3}] \leq \frac{c_{0,\text{KGT}}}{f_s}$$

$F_{x,\text{stat}}$	Maximum value of the calculated force load per cycle phase	$c_{0,\text{KGT}}$	Static basic load rating of ball screw $\rightarrow 10$
$F_{x1/2/3}$	Calculated force load per cycle phase	f_s	Safety factor against static overload $f_s = 1.0 \dots 3.0$

Linear guide

$$F_{y,\text{stat}} = \text{Max}[F_{y1}, F_{y2}, F_{y3}] \leq \frac{c_{0,\text{guide}}}{f_s}$$

$$F_{z,\text{stat}} = \text{Max}[F_{z1}, F_{z2}, F_{z3}] \leq \frac{c_{0,\text{guide}}}{f_s}$$

$$M_{x,\text{stat}} = \text{Max}[M_{x1}, M_{x2}, M_{x3}] \leq \frac{1}{k_x} \times \frac{c_{0,\text{guide}}}{f_s}$$

$$M_{y,\text{stat}} = \text{Max}[M_{y1}, M_{y2}, M_{y3}] \leq \frac{1}{k_y} \times \frac{c_{0,\text{guide}}}{f_s}$$

$$M_{z,\text{stat}} = \text{Max}[M_{z1}, M_{z2}, M_{z3}] \leq \frac{1}{k_z} \times \frac{c_{0,\text{guide}}}{f_s}$$

$F_{y/z,\text{stat}}$	Maximum value of the calculated force load per cycle phase	$M_{x1/2/3}, M_{y1/2/3}, M_{z1/2/3}$	Calculated torque load per cycle phase
$M_{x/y/z,\text{stat}}$	Maximum value of the calculated torque load per cycle phase	$c_{0,\text{guide}}$	Static basic load rating of ball screw $\rightarrow 11$

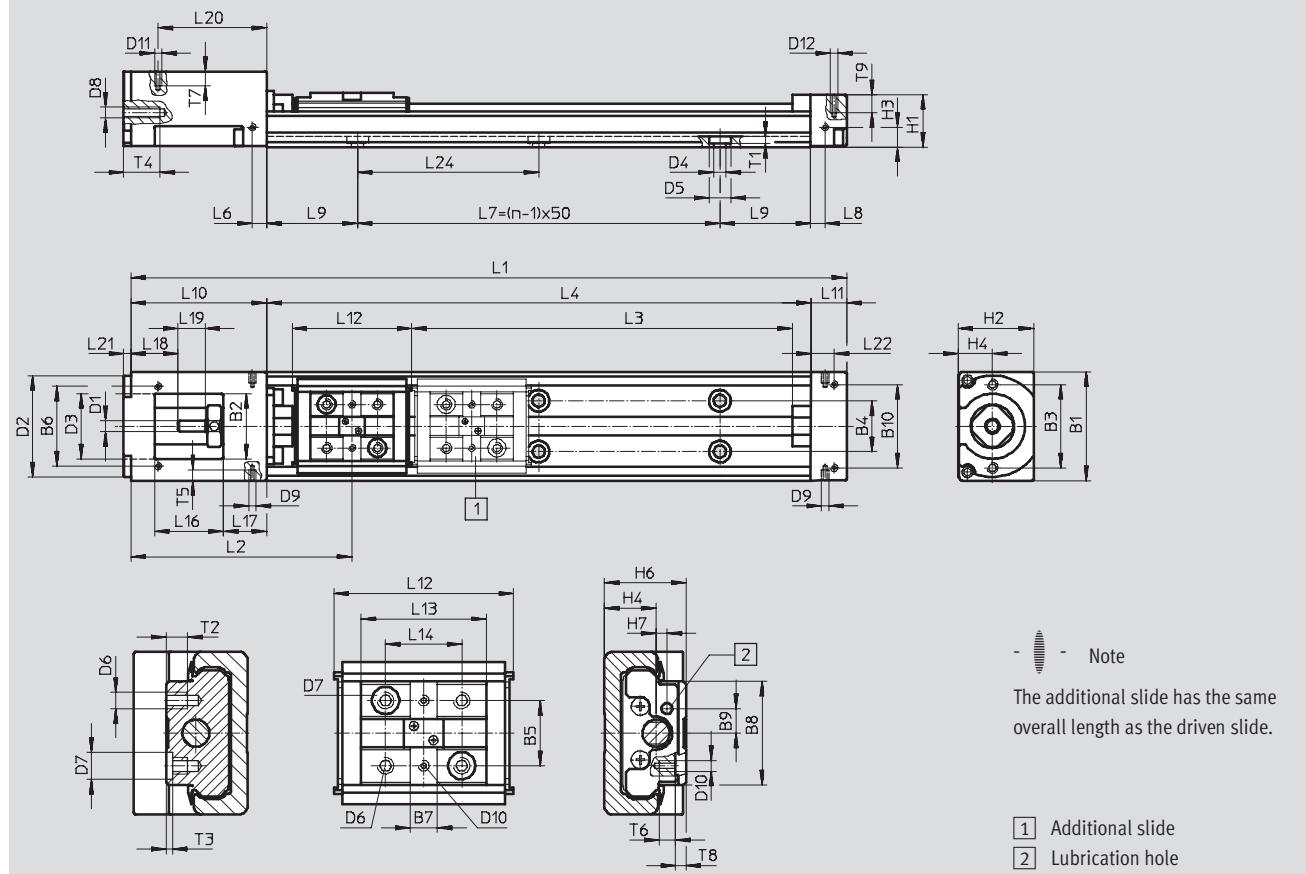

$F_{y1/2/3}, F_{z1/2/3}$	Calculated force load per cycle phase	f_s	Safety factor against static overload $f_s = 1.0 \dots 3.0$

Technical data

4 Determination of the load comparison factor f_v

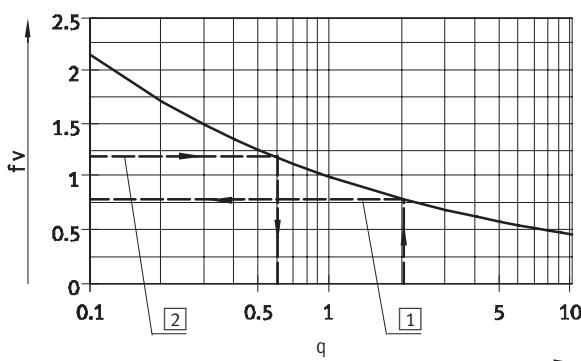

$$f_v = \frac{1}{\sqrt[3]{q}} \quad \text{with} \quad q = \frac{L_{\text{calc},\text{km}}}{L_{\text{ref},\text{km}}} = \frac{L_{\text{calc},\text{rot}}}{L_{\text{ref},\text{rot}}}$$

for $q = 1$:

Calculated service life (here desired service life) $L_{\text{calc},\text{km}} = 1 \times$ reference service life $L_{\text{ref},\text{km}}$
gives $f_v = 1$

for $q \neq 1$:

Calculated service life (here desired service life) $L_{\text{calc},\text{km}} = q \times$ reference service life $L_{\text{ref},\text{km}}$
read off (\rightarrow graph) or calculate f_v

f_v	Load comparison factor
q	Quotient of desired service life divided by reference service life
$L_{\text{calc},\text{km}}$	Calculated service life in km
$L_{\text{ref},\text{km}}$	Reference service life in km $\rightarrow 28$
$L_{\text{calc},\text{rot}}$	Calculated service life in rotations
$L_{\text{ref},\text{rot}}$	Reference service life in rotations $\rightarrow 28$

5 Calculation examples

Example 1:

EGSP-26-....-2P-H...

$L_{\text{ref},\text{km}} = 1,000 \text{ km}$

$L_{\text{calc},\text{km}} = 2,000 \text{ km}$

$$q = \frac{2000 \text{ km}}{1000 \text{ km}} = 2.0$$

$$f_v = \frac{1}{\sqrt[3]{q}} = 0.79$$

Result:

A desired service life of 200% of the reference service life means that the permissible total load must be 21% lower.

Example 2:

If the total load calculation gives a load comparison factor f_v of 1.2, the mathematical service life is only approx. 60% ($x = 0.6 \rightarrow$ graph) of the reference service life.

$$q = \frac{1}{f_v^3} = 0.58$$

6 Static sizing

Ball screw

$$F_{x,\text{stat}} = \text{Max}[F_{x1}, F_{x2}, F_{x3}] \leq \frac{C_{0,\text{KGT}}}{f_s}$$

$F_{x,\text{stat}}$	Maximum value of the calculated force load per cycle phase	$C_{0,\text{KGT}}$	Static basic load rating of ball screw $\rightarrow 26$
$F_{x1/2/3}$	Calculated force load per cycle phase	f_s	Safety factor against static overload $f_s = 1.0 \dots 3.0$

Linear guide

$$F_{y,\text{stat}} = \text{Max}[F_{y1}, F_{y2}, F_{y3}] \leq \frac{C_{0,\text{guide}}}{f_s}$$

$$F_{z,\text{stat}} = \text{Max}[F_{z1}, F_{z2}, F_{z3}] \leq \frac{C_{0,\text{guide}}}{f_s}$$

$$M_{x,\text{stat}} = \text{Max}[M_{x1}, M_{x2}, M_{x3}] \leq \frac{1}{k_x} \times \frac{C_{0,\text{guide}}}{f_s}$$

$$M_{y,\text{stat}} = \text{Max}[M_{y1}, M_{y2}, M_{y3}] \leq \frac{1}{k_y} \times \frac{C_{0,\text{guide}}}{f_s}$$

$$M_{z,\text{stat}} = \text{Max}[M_{z1}, M_{z2}, M_{z3}] \leq \frac{1}{k_z} \times \frac{C_{0,\text{guide}}}{f_s}$$

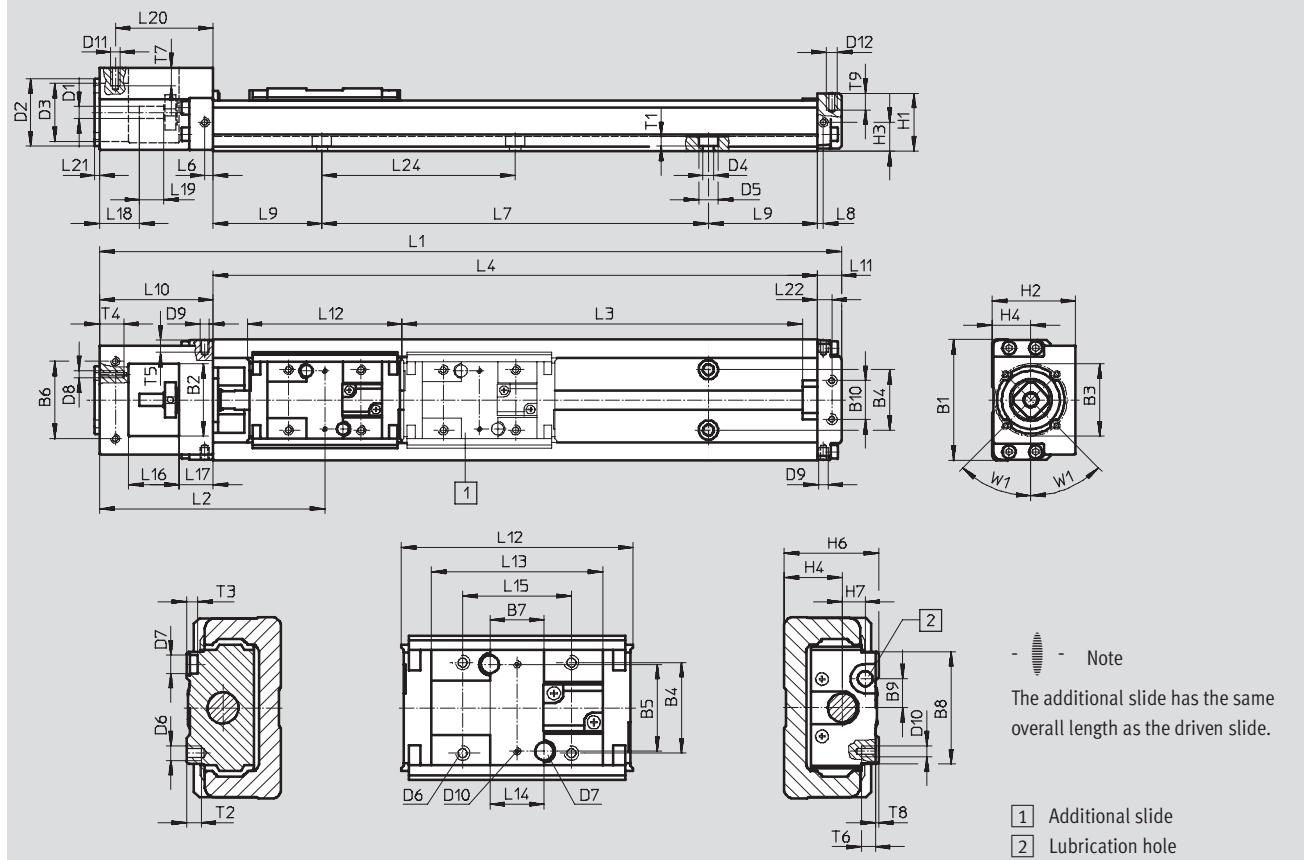

$F_{y/z,\text{stat}}$	Maximum value of the calculated force load per cycle phase	$M_{x1/2/3}$, $M_{y1/2/3}$, $M_{z1/2/3}$	Calculated torque load per cycle phase
$M_{x/y/z,\text{stat}}$	Maximum value of the calculated torque load per cycle phase	$C_{0,\text{guide}}$	Static basic load rating of ball screw $\rightarrow 27$
$F_{y1/2/3}$, $F_{z1/2/3}$	Calculated force load per cycle phase	$k_{x/y/z}$	Torque equivalence factors $\rightarrow 27$
		f_s	Safety factor against static overload $f_s = 1.0 \dots 3.0$

Products and services – everything from a single source

Products incorporating new ideas are created when enthusiasm for technology and efficiency come together. Tailor-made service goes without saying when the customer is the focus of attention.

Pneumatic and electrical drives

- Pneumatic cylinders
- Semi-rotary drives
- Handling modules
- Servopneumatic positioning systems
- Electromechanical drives
- Positioning controllers and controllers

Valves and valve terminals

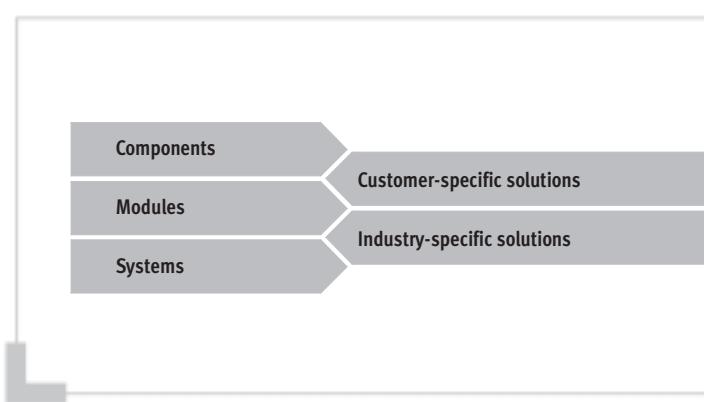

- Standard valves
- Universal and application-optimised valves
- Manually and mechanically actuated valves
- Shut-off, pressure control and flow control valves
- Proportional valves
- Safety valves

Compressed air preparation

- Service unit combinations
- Filter regulators
- Filters
- Pressure regulators
- Lubricators
- On-off and soft-start valves
- Dryers
- Pressure amplifiers
- Accessories for compressed air preparation

Fieldbus systems/ electrical peripherals

- Fieldbus Direct
- Installation system CP/CPI
- Modular electrical terminal CPX

Services from Festo to increase your productivity – across the entire value creation sequence

Engineering – for greater speed in the development process

- CAD models
- 14 engineering tools
- Digital catalogue
- FluidDRAW®
- More than 1,000 technical consultants and project engineers worldwide
- Technical hotlines

Supply chain – for greater speed in the procurement process

- E-commerce and online shop
- Online order tracking
- Euro special manufacturing service
- Logistics optimisation

Gripping and vacuum technology

- Vacuum generators
- Vacuum grippers
- Vacuum security valves
- Vacuum accessories
- Standard grippers
- Micro grippers
- Precision grippers
- Heavy-duty grippers

Sensors and monitoring units

- Proximity sensors
- Pressure and flow sensors
- Display and operating units
- Inductive and optical proximity sensors
- Displacement encoders for positioning cylinders
- Optical orientation detection and quality inspection

Controllers/bus systems

- Pneumatic and electropneumatic controllers
- Programmable logic controllers
- Fieldbus systems and accessories
- Timers/counters
- Software for visualisation and data acquisition
- Display and operating units

Accessories

- Pipes
- Tubing
- Pipe connectors and fittings
- Electrical connection technology
- Silencers
- Reservoirs
- Air guns

All in all, 100% product and service quality

A customer-oriented range with unlimited flexibility: Components combine to produce ready-to-install modules and systems. Included in this are special designs – since at Festo, most industry-specific products and customer-specific solutions are based on the 23,000 plus catalogue products. Combined with the services for the entire value creation sequence, the end result is unbeatable economy.

Assembly – for greater speed in the assembly/commissioning process

- Prepack
- Preassembly
- Turnkey pneumatics
- Handling solutions

Operation – for greater speed in the operational process

- Spare parts service
- Energy saving service
- Compressed air consumption analysis
- Compressed air quality analysis
- Customer service

What must be observed when using Festo components?

Specified limit values for technical data and any specific instructions must be adhered to by the user in order to ensure recommended operating conditions.

When pneumatic components are used, the user shall ensure that they are operated using correctly prepared compressed air without aggressive media.

When Festo components are used in safety-oriented applications, the user shall ensure that all applicable

national and local safety laws and regulations, for example the machine directive, together with the relevant references to standards are observed. Unauthorised conversions or modifications to products and systems from Festo involve a safety risk and are thus not permissible. Festo does not accept any liability for resulting damages. You should contact Festo's advisors if one of the following apply to your application:

- The ambient conditions and conditions of use or the operating medium differ from the specified technical data.
- The product is to perform a safety function.
- A risk or safety analysis is required.
- You are unsure about the product's suitability for use in the planned application.
- You are unsure about the product's suitability for use in safety-oriented applications.

All technical data applies at the time of going to print.
