

The controller can measurable thermal distribution, center temperature, history curve, data statements of the autoclave sterilization and also can record and storage automatically. It can upload to computer.

Applicable to static and rotating pot, both hard and soft packaging products can be measured.

Accuracy of temperature: ± 0.4 °C, measurement interval: 1S ~ 3600S (can be set), battery capacity: 450mAh--8500mAh

Operating ambient temperature: -55°C~130°C

The red ring and yellow ring is all wireless temperature sensor. They have the same function, just have different shape. The blue ring is the reader, used for reading the data in wireless temperature sensor. It can be connected with computer.
